Office of Conservation calls for public input to the Water Resources Commission

The Louisiana Office of Conservation is calling on interested members of the public to share their ideas on ground and surface water management and related concerns over the next two weeks as part of an ongoing effort to strategize on the development process for a state water resources management plan.

The comment period follows last week's Office of Conservation-hosted workshop for the state Water Resources Commission (WRC) in Baton Rouge, held to help outline the next steps in the formulation of a state water plan. The office serves as the staffing agency for WRC, which has authority to evaluate the state's ground and surface water resources, including current and projected demands, inventory of water supplies, and identifying potential future deficit areas.

In a recent resolution, WRC stated its ultimate goal in this way - "development of a comprehensive statewide water resources management plan that will provide a sound basis for supplying Louisiana's future water needs."

More than 80 people attended the meeting, which included overviews of the recently approved coastal master plan and the state's current ground and surface water management infrastructure, along with a roundtable discussion with WRC members on the direction of long-term planning.

Featured speakers at the workshop were Jerome Zeringue, executive director of the Coastal Protection and Restoration Authority; Karen Gautreaux, director of government relations at The Nature Conservancy of Louisiana and a former deputy secretary at the Louisiana Department of Environmental Quality; and Mark Davis, director of Tulane University Institute on Water Resources Law and Policy. Both Gautreaux and Davis are recent appointees to WRC.

For more information on the workshop, visit the website to view the presentations and relevant planning documents at <http://dnr.louisiana.gov/index.cfm?md=pagebuilder&tmp=home&pid=475>.

To further assist WRC in the development of the next steps for a state water resources management plan, the Office of Conservation will take public comments through the close of business on Monday, November 4, 2013.

Comments can be returned by regular mail to:

Louisiana Office of Conservation

Subject: Some information & talking points

This is what I found about the problems Jefferson Island Storage & Hub had paying their property taxes to Iberia parish. JISH sued Iberia parish. Also are some other talking points about JISH.

Another thing, JISH will say they are not using anymore water from the Chicot aquifer than farmers that is not really true. JISH will use millions of gallons a day to leach out the salt domes, & then the salty water will be pumped into wells, never to be used again. Whereas farmers will use water & then it will returned to be used again.

Also the new permits will be for 2 caverns now, but after that they can do as many as they want.

Jefferson Island Storage & Hub, LLC 2009 OPERATING AGREEMENT with Louisiana

3.4. Water Rights; Chicot Aquifer Withdrawal Restriction. Further without limiting the foregoing, and subject to obtaining any approvals required under Applicable Law, Jefferson Island shall have the right to drill for and extract water as may be necessary, incidental, or desirable for the Permitted Purposes, including, without limitation, http://dnr.louisiana.gov/assets/OC/im_div/20090818-IMD-OpAgmt-JISH.pdf

http://www.iberianet.com/news/agl-sol-still-at-odds/article_ab837f50-5ddb-5a7a-9c51-9105917fd9eb.html

The company also declined to reveal how much the company owes in property taxes to Iberia Parish or how much the company pays in local taxes to municipalities and parishes. Jefferson Island Storage and Hub has been appealing its assessment for about three years.

<http://judicialview.com/State-Cases/Louisiana/Taxation/Jefferson-Island-Storage-Hub-LLC-v-Louisiana-Tax-Commission/42/35330>

Jefferson Island Storage & Hub, LLC v Louisiana Tax Commission

Case No. 2011 CA 0882 (LA Ct. App., 1st Circ., Jul. 15, 2011)

This matter is before us on appeal by Jefferson Island Storage and Hub, L.L.C. (Jefferson Island), from a decision rendered by the Nineteenth Judicial District Court in an appeal taken to that court from a ruling of the Louisiana Tax Commission (LTC). The matter before us involves challenges to ad valorem tax assessments on property of Jefferson Island assessed for tax years 2006 to 2010. On appeal, Jefferson Island contends that the district court erred in refusing to address and/or render judgment on the correctness of all aspects of the contested tax assessments, thereby "splitting the appeal" and denying Jefferson Island the ability to recover the full amount of overpaid taxes in a single proceeding. Jefferson Island also contends that the district court erred as a matter of law in failing to address and affirm the merits of the LTC's resolution of all other issues in addition to the pad gas issue and in failing to accordingly order a refund of all overpaid taxes arising out of the 2006-2010 assessments.

Finding no error by the district court, we affirm.

FACTS AND PROCEDURAL BACKGROUND

Jefferson Island is a foreign limited liability company that operates a natural gas salt dome storage facility in Iberia Parish on and/or under property leased from the State of Louisiana. The facility consists of salt caverns located beneath Lake Peigneur, as well as various facilities, including flow lines, wells, and wellheads. After Jefferson Island received notice of the 2006 ad valorem assessment of its property by the Iberia Parish Assessor (Assessor), Rickey J. Huval, Sr., it filed a timely protest, first with the Assessor and then with the Iberia Parish Board of Review, which upheld the assessment. Jefferson Island timely paid the ad valorem taxes under protest, and then filed an appeal of the assessment to the LTC.

Upon receiving its 2007 ad valorem assessment, Jefferson Island again protested on the same grounds it had urged in objecting to the 2006 assessment. Once again, Jefferson Island filed

unsuccessful protests of the assessment with the Assessor and the Iberia Parish Board of Review. Jefferson Island paid the taxes under protest and appealed the 2007 assessment to the LTC, where the appeal was consolidated with the pending appeal of the 2006 assessment.

OK1 2011

First permit application submitted had 15 pages of deficiencies resulting in AGL Resources hiring a firm to write a revised permit application.

TKE Engineering, JISH's engineering co. engineer for sparsely populated area Moss Bluff, TX natural gas salt dome caverns engineer company, completed in 2002 and had 2 explosions in 2004, AGL Resources' Richard Hyde was working for Duke Energy, operator, at the time.

<http://www.chron.com/business/energy/article/Explosion-rocks-gas-storage-facility-in-Liberty-1557248.php> <http://www.tke-engineering.com/proj2.htm>

Water-level decline in the Chicot aquifer system during the period 1995-2005, based on data from the USGS/DOTD water-level network.

The USGS has not conducted any studies that were specially designed to assess the effects of groundwater withdrawals at Jefferson Island Storage & Hub.

Eugene Owen, of Baton Rouge, Director & Chairman of Utility Holdings Inc., holding company for Baton Rouge Water Co., Parish Water Co., Inc., Ascension Water Co. and LAWCO, New Iberia, stated that over 8 years ago because of contamination problems, wells had to be moved, costing millions. Increased withdrawal from the Chicot Aquifer by AGL's (JISH) proposed well-pumping would significantly accelerate the rate of potential contaminants, arsenic.

Hi General:

Great letter to Tim earlier.

Your editorial made the Daily Iberian today.

Curious things are happening here. Long story cut very short a person with a big history in properties around the country contacted me via our former real estate agent to buy lakefront property to retire. He lives in Lafayette, said he had no idea about what is happening in the lake etc., absolutely wants lakefront.

He has a financial business, has a radio talk show on KPEL & in 2011 established another property investment company here in Louisiana. The others found were in Pennsylvania & Virginia. The name is Lynn Wood Properties, LLC.

That is the short story.

Meanwhile here AGL has been litigating with Iberia Parish for non-payment of taxes for years. There still has not been resolution.

Also very important they were the only cavern storage company in Louisiana that did not require FERC permitting. They explain they personally do not transmit they only store. I don't know since they came on line other companies have bypassed FERC but I don't think so. Nara

General Honore

Let me know if this will suffice.

Glo

What is Jefferson Island Storage & Hub?

Jefferson Island Storage & Hub (JISH) is a salt dome natural gas storage facility owned by AGL Resources, Atlanta, GA. and located near Delcambre, Louisiana (Vermilion and Iberia parishes). At JISH, currently two underground salt caverns are used to store natural gas before it is put into pipelines and sent to residential and commercial customers throughout the state and country.

AGL Resources serves customers in Virginia, New Jersey, Tennessee, Maryland, Georgia, Illinois, Ohio, Florida and New York.

JISH has filed applications for permits for the expansion with the U.S. Army Corps of Engineers (Corps) to perform dredging operations at Lake Peigneur. Filed with the Louisiana Department of Natural Resources to drill two new brine extraction caverns in Lake Peigneur; three brine disposal wells on the existing JISH property, as well as permits for fresh water wells. JISH has also submitted permit applications with the Louisiana Department of Natural Resources to construct and operate pipelines from the plant to the new wells.

http://triblive.com/x/pittsburghtrib/s_741745.html#ixzz2XjSMm4bc

Some companies that control America's natural gas are pushing for government approval to export gas overseas for higher profits on the international market, a move that will significantly drive up prices in the United States because this nation still imports more than 10 percent of its domestic needs.

Among the biggest expected customers for American gas exports: energy-thirsty China, other Asian nations, Europe, Caribbean and Bahamas

http://www.iberianet.com/news/agl-sol-still-at-odds/article_ab837f50-5ddb-5a7a-9c51-9105917fd9eb.htm

The company will not commit to storing only natural gas in the caverns, as the operating agreement allows for the storage of other resources including carbon dioxide and oil.

The company chose Jefferson Island because of the location's potential for expansion.

http://www.aglr.com/pressroom/press_jish102406.aspx

The company bought the Jefferson Island site because of its location near the Henry Hub

How will JISH create the new caverns?

JISH will use salt extraction to carve out caverns 1,500 feet below the lake bottom. Salt caverns are formed by injecting a water stream down a well bore in order to "wash" a cavity in a thick deposit of salt.

Where will the water come from for the process?

Water from the Chicot Aquifer will be used to create the new caverns.

AGL Resources will use 5.18 million gallons a day... from the Chicot Aquifer. million gallons of water a day for at least 2 years to expand the two caverns. Plus any additional caverns built. The salt water will then be pumped into underground wells never to be used again, unlike farmers pumping well water.

Jefferson Island Storage & Hub, LLC 2009 OPERATING AGREEMENT with Louisiana

3.4. Water Rights; Chicot Aquifer Withdrawal Restriction. Further without limiting the foregoing, and subject to obtaining any approvals required under Applicable Law, Jefferson Island shall have the right to drill for and extract water as may be necessary, incidental, or desirable for the Permitted Purposes, including, without limitation,

Water-level declined in the Chicot aquifer system during the period 1995-2005, based on data from the USGS/DOTD water-level network.

The USGS has not conducted any studies that were specially designed to assess the effects of groundwater withdrawals at Jefferson Island Storage & Hub.

Eugene Owen, of Baton Rouge, Director BR Water Co., Parish Water Co., Inc., Ascension Water Co. and LAWCO, New Iberia, stated.... Increased withdrawal from the Chicot Aquifer by AGL's (JISH) proposed well-pumping would significantly accelerate the rate of potential contaminants, arsenic. <http://senate.legis.state.la.us/Environment/archives/2011/video.htm>

AGL Resources has not conducted an Environmental Impact Statement or Seismic Studies.

Feb 1, 2008 Following a power outage residents said they heard deafening noises from the plant and natural gas being released.

AGL spokesman Jack Holt confirmed that some gas was released from the plant Tuesday night following the power outage, but that it was in accordance with safety procedures and posed no hazard to the area.

<http://www.topix.net/forum/city/abbeyville-la/TE0R3592SD65GUD1A>

Residents are also concerned about safety.

First permit application submitted had 15 pages of deficiencies resulting in AGL Resources hiring a firm to write a revised permit application.

TKE Engineering, JISH's engineering co. was also the engineer for sparsely populated area Moss Bluff, TX natural gas salt dome caverns engineer company, completed in 2002 and had 2 explosions in 2004, AGL Resources, Richard Hyde, Managing Director, was working for Duke Energy, operator, at the time.

<http://www.chron.com/business/energy/article/Explosion-rocks-gas-storage-facility-in-Liberty-1557248.php>

<http://www.tke-engineering.com/proj2.htm> | <http://pivotalenergydev.com/About-Us/Management-Team/Richard-Hyde.aspx>

<http://savethewater.org/tag/usa-water-news/>

There are bubbles in Lake Peigneur, and no one knows the cause. AGL Resources said that while the testing has not identified the precise cause of the bubbling, testing has confirmed that "it is not coming from our wells."

No studies have been done.

Giant Louisiana sinkhole burps, seismic activity reported

Updated: Jun 21, 2013 5:35 PM CDT

It's been over a year since a massive sinkhole near Bayou Corne and Grand Bayou began causing problems. Bubbling in the bayou led to the sinkhole. About 350 people have been forced out of their homes since August.

Bubbles were spotted in Bayou Corne and Grand Bayou in June 2012. Two months later, the ground opened up.

Louisiana Environmental Action Network (LEAN)-"Oil and water can be seen flowing from the sinkhole into the adjacent environment."

AGL Resources has sued the State of Louisiana.

Water-level decline in the Chicot aquifer system during the period 1995 to 2005, based on data from the USGS/DOTD water-level network.

State of Louisiana
Department of Health and Hospitals
Office of Public Health

June 28, 2013

To all interested parties:

The attached list is a compilation of all Louisiana public water systems (PWS), which had violations of drinking water regulations in 2012. They are listed by parish and include the public water system identification (PWS ID), name of the supply, a description of the type of violation and the date of violation and are separated into community systems which serve homes and non-community systems which provide water to stores, schools, factories, rest areas, etc. A public water supply is one that serves 25 or more people or has 15 or more service connections for 60 or more days a year. There were 1422 regulated water systems during 2012, of which 1055 were community and 367 were non-community water systems. In 2012, 585 water systems (community [C] - 469 & non-community [N] - 116) had 1789 total violations (C-1529 & N-260). These violations fall into three major categories:

- a) **Maximum Contaminant Level violation** - Under the Safe Drinking Water Act (SDWA), the Environmental Protection Agency (EPA) sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).
- b) **Treatment Technique violation** - For some regulations, the EPA establishes treatment techniques in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, turbidity and lead.
- c) **Monitoring & Reporting violations** - A PWS is required to monitor and verify that the levels of contaminants present in the water do not exceed the MCL on a regular schedule. If a sample is not collected and analyzed, a monitoring violation occurs. A reporting violation also includes failure to report test results correctly to the state or to notify water system customers of a violation in a timely or appropriate manner.

A separate table summarizing the 2012 violations in these three categories is included with this report; however this table only shows those federal violations considered "major" within the three categories, thus the violation counts may not agree with the list totals discussed in this report which includes all federal and state violations for 2012.

In 2012, seven percent of the violations [C-106 & N-10] and 15% of the systems with violation [C-76 & N-10]) were bacteriological MCL violations. Community and large non-community systems are required to be tested for coliform bacteria every month and small non-community systems are checked every three months. Although coliform bacteria are found throughout the environment and can enter water through various avenues, they are primarily associated with the intestinal track of mammals and sewage and are used as an indicator of potential health related contamination of drinking water. If the presence of coliform is confirmed, the system is in violation and is required to notify its customers of the problem(s). These are listed in the report as "MCL (TCR), MONTHLY - COLIFORM (TCR)". If a special kind of coliform bacteria, which is more directly related to warm

blooded animals, is found the report indicates this as "MCL (TCR), ACUTE - COLIFORM (TCR)". Since these acute violations are of much greater health concern, the manner and speed in which customers are notified is greatly enhanced. Louisiana had only two acute TCR violations (C-1 & N-1) with two systems in violation (C-1 & N-1). Excluding the acute violations, the notification of customers always comes after the violation occurred. The intent of the notice is to inform the customers of the potential health risk and to motivate the water systems to undertake actions that will prevent a reoccurrence of the problem.

During 2012, the responsibility for collecting bacteriological samples was transferred from OPH to the individual water systems. Regardless of sample collector, if a sample(s) is not collected, a sampling violation occurs and the system must notify their customers. Louisiana's public water systems had initial ("ROUTINE") and follow-up ("REPEAT") bacteriological sampling violations in 2012. Initial refers to the first round of sampling and follow-up refers any subsequent confirmation sampling. The report lists 219 "MONITORING (TCR), ROUTINE MAJOR" violations (C-143 & N-76) with 142 systems in violation (C-81 & N-61), and 11 "MONITORING (TCR), REPEAT MAJOR" violations (C-8 & N-3) with 11 systems in violation (C-8 & N-3). Major refers to a failure to collect any samples. There were also a few minor bacteriological monitoring violations.

Additionally, public water systems that utilize groundwater as their source are required to monitor their source water (wells) for bacteriological contaminants if coliform bacteria are found during routine bacteriological sampling. Twenty-six water systems (C-17 & N-9) with a combined 47 violations (C-25 & N-22) failed to complete this monitoring.

Violations containing the terms "SWTR", "TURBIDITY" or "IESWTR" are caused by public water systems that utilize surface water (lakes, rivers and streams) as their source that were not able to produce water with a low enough turbidity or did not monitor turbidity frequently enough. Turbidity is the measure of the amount of suspended material in the water. During the report year there were 63 regulated surface water systems in Louisiana, and 59 monitoring violations (C-59 & N-0) occurred with 8 systems in violation (C-4 & N-0), and one treatment/turbidity violation (C-1 & N-0) with one system in violation (C-1 & N-0). These violations normally occur in the winter and are associated with the increased difficulty of treating surface waters during colder months. This notification also comes after the violation.

In Louisiana, most of the chemical sampling (excluding lead & copper, disinfectants and disinfection-by-products) is done by Office of Public Health staff. Samples to check for numerous inorganic, organic and radiological compounds are routinely collected and analyzed. If levels of these are above a safe level, an MCL violation is issued or if samples are not collected in a timely manner, a monitoring violation is issued. There were 21 chemical MCL violations for arsenic (C-21 & N-0) with 8 systems in violation (C-8 & N-0). Arsenic is a metal found in some ground water.

Public water systems are required to maintain an adequate level of disinfectant in their water system and are issued violations if they fail to maintain a protective level. In 2012, there were 165 inadequate chlorine residual violations (C-111 & N-54) with 103 systems in violation (C-67 & N-36).

Public water systems are also required to test their water for disinfection-by-products and surface water systems are additionally required to test for disinfectant-by-product precursors. Total Trihalomethanes (TTHMs), Total Haloacetic Acids (HAA5) and Chlorite are all disinfection-by-

products formed by disinfectants used to treat drinking water. Prior to 2004, only large systems were required to monitor for TTHMs but now all community and non-transient non-community water systems are required to monitor TTHMs, HAA5 and Chlorite. Systems failed to monitor for the TTHMs (160 violations [C-148 & N-12] with 137 systems in violation [C-125 & N-12]), HAA5 (160 violations [C-148 & N-12] with 137 systems in violation [C-125 & N-12]), Chlorite (one violation [C-1 & N-0] with one system in violation [C-1 & N-0]) and disinfection-by-product precursors (8 violations [C-8 & N-0] with three systems in violation [C-3 & N-0]). Also, there were also 97 violations (C-97 & N-0) of the MCL for TTHMs with 38 systems in violation (C-38 & N-0), and 29 violations (C-29 & N-0) of the MCL for HAA5 with 15 systems in violation (C-15 & N-0), and one violation (C-1 & N-0) of the MCL for Chlorite with one system in violation (C-1 & N-0).

This report is an effort by the EPA and the Louisiana Office of Public Health to provide the general public with additional information regarding the quality of their drinking water. This report is a follow-up to earlier reports dating back to 1996. There was an increase in the number of violations due to ongoing efforts to implement disinfection- by-product monitoring for all disinfecting systems, as well as the transfer of responsibility, from OPH to individual water systems, for collecting bacteriological samples. A report on the violations for 2013 will be issued in the summer of 2014. Additionally, each water system produces an annual Consumer Confidence Reports which provides detailed information about chemical sampling results and drinking water violations. This and other information drinking water information is available on EPA's internet site and will be available on the health department's internet site. A summary form developed by EPA with violation total and definitions is available upon request.

If you have any additional questions, please feel free to call or write.

Where to Obtain the 2012 Annual State Public Water Systems Report

From: Glo [mailto:conmikeglo@cox.net]
Sent: Wednesday, January 22, 2014 12:50 PM
Subject: October 2013 Office of Conservation Water Resources Commission Public Input

October 2013 - Water Resources Commission - The Louisiana Office of Conservation was calling on interested members of the public to share their ideas on ground and surface water management and related concerns over the next two weeks as part of an ongoing effort to strategize on the development process for a state water resources management plan. See Attachment.

Comments and input.

1999 Sparta Aquifer - Groundwater Commission "the continued uncontrolled use of groundwater from Sparta and other aquifers may create critical problems;"

<http://www.spartaaquifer.com/about.php>

2003 Mississippi River Alluvial Aquifer - Community of Grand Bayou also located near the Napoleonville Salt Dome natural gas cavern released natural gas into the water aquifer.

Spring 2004 Mississippi River Alluvial Aquifer - Bayou Corne - A consulting hydrogeologist worked in spring 2004 to finish removing natural gas that was then trapped 150 feet under the Grand Bayou area found gas had been released into the same subsurface aquifer at least five years earlier, regulatory filings with the Louisiana Department of Environmental Quality say.

<http://theadvocate.com/home/4097747-125/gas-found-in-aquifer-previously>

May 2011 Chicot aquifer serving 15 parishes - Eugene Owen, of Baton Rouge, Director & Chairman of Utility Holdings Inc., holding company for Baton Rouge Water Co., Parish Water Co., Inc., Ascension Water Co. and LAWCO, New Iberia, stated that over 9 years ago because of contamination problems, wells had to be moved in Iberia parish, costing millions. Increased withdrawal from the Chicot Aquifer by AGL Resources? (Jefferson Island Storage & Hub) proposed well-pumping would significantly accelerate the rate of potential contaminants,

arsenic. <http://senate.legis.state.la.us/Environment/archives/2011/video.htm>

May 2011 Chicot aquifer - A hydrologist claims withdrawal from the Chicot aquifer by AGL Resources? (Jefferson Island Storage & Hub) could lower the Chicot aquifer as much as 17 to 75 feet. The Chicot aquifer has not recovered from the 1994 water withdrawal from the first two natural gas salt dome caverns and one concern would be more salt water intrusion.

<http://senate.legis.state.la.us/Environment/archives/2011/video.htm>

July 2012 Each day over 8.5 billion gallons are withdrawn from the state's surface and groundwater supplies. Industrial and agricultural activity, drought, and saltwater intrusion threaten aquifer levels and water quality. Regional and interstate water needs are growing yet deteriorating supply, treatment and distribution systems cannot meet future demands. What can be done to combat Louisiana's looming water problems? Who owns and controls the state's water supply? How do corporate and governmental policies affect the most precious resource of all: water?

http://beta.lpb.org/images/ps_uploads/201207waterwoes2.pdf

10/15/2012 Mississippi River Alluvial Aquifer - Bayou Corne Sinkhole - Natural gas discovered in an underground aquifer near Bayou Corne may be the third time in the past 13 years that gas has been loosed in shallow formations over or

near the subterranean Napoleonville salt dome, according to a review of regulatory filings <http://theadvocate.com/home/4097747-125/gas-found-in-aquifer-previously>

11/24/2012 Southern Hills Aquifer - Concerns about saltwater intrusion into Baton Rouge drinking water have been around since the 1970s. As more water is drawn from the ground north of the fault, the difference in pressure pulls the saltier water across the fault and closer to groundwater wells serving Baton Rouge and surrounding areas.
<http://theadvocate.com/home/4424325-125/aquifer-models-expected-in-2013>

9/10/2013 Sparta aquifer - Declining aquifer levels in south Caddo Parish. Water usage is putting the south Caddo Parish aquifers at dangerously low levels.
<http://www.ktbs.com/story/23395825/declining-aquifer-levels-in-south-caddo-parish>

9/28/2013 Mississippi River Alluvial Aquifer - A state seismic expert has found two likely existing ?deep? sources continuing to feed methane gas in Bayou Corne and Grand Bayou communities <http://theadvocate.com/home/7085262-125/story.html>

10/10/2013 Louisiana public water system has brain-eating amoeba The Federal Centers for Disease Control and Prevention has confirmed the presence of a rare brain-eating amoeba.

<http://www.usatoday.com/story/news/nation/2013/10/09/water-system-brain-eating-amoeba/2951933/>

2009 Jefferson Island Storage & Hub, LLC 2009 OPERATING AGREEMENT with Louisiana
3.4. Water Rights; Chicot Aquifer Withdrawal Restriction. Further without limiting the foregoing and subject to obtaining any approvals required under Applicable Law, Jefferson Island shall have the right to drill for and extract water as may be necessary, incidental, or desirable for the Permitted Purposes, including, without limitation, http://dnr.louisiana.gov/assets/OC/im_div/20090818-IMD-OpAgmt-JISH.pdf

Water-level declined in the Chicot aquifer system during the period 1995-2005, based on data from the USGS/DOTD water-level network.
http://www.epa.gov/region6/water/swp/groundwater/2009-gws-presentations/12-gw-status-in-louisiana_lovelace.pdf

In spite of this information the Department of Natural Resources, Coastal Management, has issued one permit to AGL Resources (Jefferson Island Storage & Hub) to expand their natural gas salt dome storage caverns and add 2 more caverns using millions of gallons of water from the Chicot aquifer.

No more permits to expand or add salt dome storage caverns to Jefferson Island Storage & Hub should be issued without an Environmental Impact Statement, Federal standard, seismic studies, cause of the bubbling in the Lake Peigneur, and a study of the Chicot aquifer. Already one horrific disaster there in 1980.
<http://www.youtube.com/watch?v=ddlrGkeQzsl>

At hearings in Baton Rouge at the Senate Natural Resources Committee, the Senate Environmental Quality Committee, and more to ask them to please help protect the Chicot aquifer. Expert testimonies were given on what will happen to the Chicot aquifer. Most legislators at those hearings ignored testimonies of experts.

I have met people like LTG Russel L. Honore, U.S. Army, Retired who speaks his mind and speaks his heart. General Honore states that ?Our state government has done an excellent job of making Louisiana business friendly through tax breaks but when will he (Jindal) demand from his policy makers and agencies that our environment, wildlife and citizens must take precedence for economic success?. We need more brave people like General Honore who speaks his mind.

Time and time again, attempts to protect people?s lives and the Chicot aquifer were stopped:

2007 - Rep. Sydney Mae Durand

HB 617 - local bill to stop cavern expansion at Jefferson Island Salt Dome

2008 - Senator Troy Hebert

SB 194 - protect groundwater by preventing any expansion or conversion of storage caverns at Jefferson Island Storage & Hub.

SB754 - water conservation limiting extraction of drinking water each day to 3MG to create cavern storage at Jefferson Island Storage & Hub. Passed & signed by Governor Jindal followed by lawsuit, bill dismissed by judicial ruling for a technicality.

Rep. Henry Burns (Monroe area) introduces HB1220 to create Operational Agreement allowing the state & natural gas storage companies to work jointly. Senator Hebert introduces an amendment to exclude JI. Amendment voted down & bill passed unanimously.

2012 - Senator Fred Mills sought to require a federal standard Environmental Impact Statement prior to DNR permitting hydrocarbon storage or brine well extraction using more than 2MG per day from the Chicot Aquifer.

2013 - **Senator Fred Mills - SB200** requiring a federal standard Environmental Impact Statement before issuance of permits to construct or operate salt dome storage caverns. SB200 made it to the Senate floor but was defeated by 2 votes.

SB532 MILLS CONSERVATION - Provides for certain requirements for use of ground water from the Chicot Aquifer, an Environmental Impact Statement before doing so. Sen. Fred Mills, R- New Iberia, has worked very hard to try to protect our only fresh water source, the Chicot aquifer.

SB532 was heard by the Senate DNR and Health & Welfare committees. Both committees voted against the bill. This would have help prevent saltwater intrusion into the Chicot aquifer. The bill would have made sure with an Environmental Impact Statement that the Chicot aquifer would be protected against large withdrawals.

Sen. Gerald Long, R-Winnfield Head of the Natural Resources Senate Committee heard our pleas to get Bill 532 to the floor for a vote and voted against it. Sen. Long voted against SB200, even when it passed the Committee.

Some of the interviews and panelists over the years that struck me the most were:

Don Briggs, lobbyist, Louisiana Oil and Gas Association stated that with the abundance of natural gas we are looking to export the gas. Don Briggs insisted that the oil and gas companies are working with the state to protect our water supplies.

James Welsh, Commissioner of Conservation, DNR, spoke of needing a comprehensive water plan for the state.

Hays Town, Jr., Save Baton Rouge Water, stated that there are problems with salt water intrusion in the aquifer that furnishes the water for Baton Rouge because of over use. He stated that before long Baton Rouge will be getting their water from the Mississippi river & paying a lot more for it. <http://www.savebrwater.com/>

At one hearing April 12, 2013 a lobbyist for AGL Resources that is expanding the salt domes and going to use billions of gallons from the Chicot aquifer, said they did not want an Environmental Impact Statement as it would be a cancer (bad) for AGL Resources.

Bill 532, April 12 hearing one senator read that the USGS stated that there was no need for an Environmental Impact Statement. This after Director McNutt, USGS, Washington, D.C. stated that the USGS had not studied this enough to issue a comment one way or the other in an email to me.

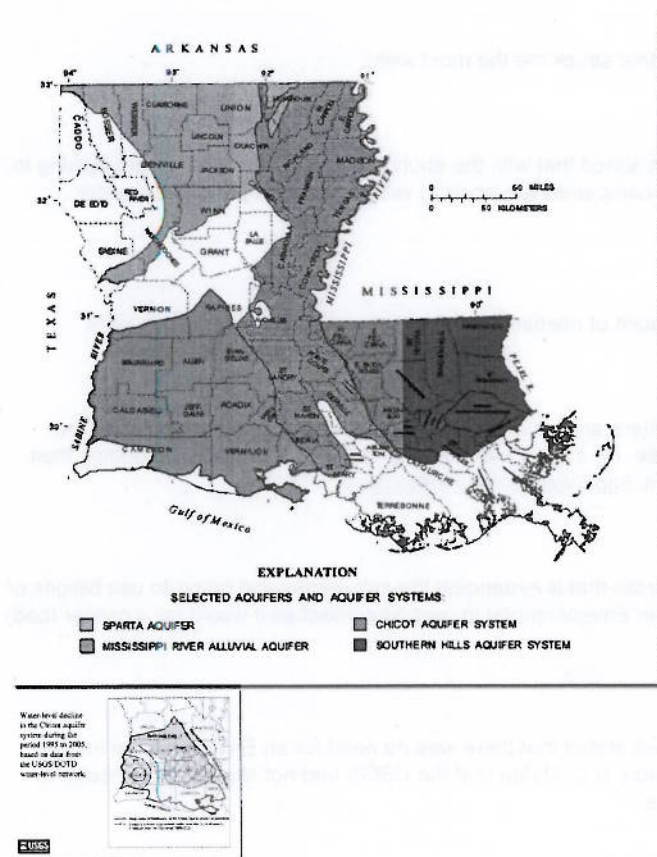

In reality the shortage of water regardless of further controls placed in the hand of the Department of Natural

Resources with regards to ground water will not go away. The industries themselves install the flow meters and read the meters and record the volume and not any third party.

The citizens of Louisiana should worry about their fresh water. We citizens are screaming and only a few are listening. Finally people are waking up to the fact that there are problems with our fresh water sources in Louisiana. This is about responsible withdrawal from our aquifers and use of ground water. The most important thing learned is that it is time for action and not more talk.

These were some of the Class III Brine Solution Mining Applications Pending

Company	Parish	Gals per day	Water Source

Subject: Figures show 12 La. salt caverns with walls thinner than collapsed Assumption Parish cavern

Proposed salt-dome regulations under fire

By David J. Mitchell

dmitchell@theadvocate.com Tue, 26 Nov 2013

At least a dozen salt-dome caverns in Louisiana are as close to the edge of their supporting underground formations as the one that collapsed last year and caused the yawning sinkhole in Assumption Parish.

Data collected by the state in response to the sinkhole also shows those 12 caverns, along with 15 others, would violate proposed rules mandating a buffer zone of sorts for future caverns to help ensure they are structurally sound.

The Texas Brine Co. cavern that caused the sinkhole was mined too close to the outer edge of a salt formation called the Napoleonville Dome, which left a relatively thin wall of salt between the cavity and less stable outer rock.

Scientists believe that salt cavern wall failed, causing a subsurface scrambling of rock that created the sinkhole and freed oil and natural gas from underground deposits.

Marylee Orr, executive director of the Louisiana Environmental Action Network, said the number of caverns within the proposed buffer zone is a concern because a problem with just one of them can be catastrophic. She said the state's proposed rules need to be even tighter and more protective of the public and the environment.

"I think we need to be cautious because if there is a problem, it is not a small problem, ... you know what I mean?" Orr said. "It is very impactful to the community, and, I believe, to their health."

But state officials say there is no indication elsewhere of problems similar to those that caused Texas Brine's Oxy Geismar 3 cavern to collapse.

"To date no other cavern facility has been found to demonstrate the type of warning signs that would indicate impending structural failure of the nature experienced by Texas Brine's Oxy Geismar 3," said Patrick Courreges, communications director for the state Department of Natural Resources.

Salt-dome caverns are important to industry in Louisiana, either for the brine created by mining them or for the storage capacity they offer when emptied of the brine.

The Texas Brine cavern collapse — which forced the ongoing evacuation of many homes near the sinkhole because of flammable gas bubbling up through aquifers — prompted DNR's Office of Conservation to rewrite rules.

Courreges said that while there have been no signs of problems with other caverns, the Office of Conservation is playing it safe because of the possible risk.

The changes would apply to caverns used to make brine, such as Texas Brine's, as well as those used to store gas and other flammable hydrocarbons.

The proposals include a new 300-foot minimum safety distance from what is called the “edge of salt,” along with new requirements for long-term monitoring of some caverns.

After the Texas Brine collapse, the state required salt-dome operators to show how close the 256 caverns in Louisiana are to the edge of the salt formations that, in essence, house them.

In all, 27 caverns are closer than the proposed 300-foot minimum distance for future caverns, according to DNR data compiled at The Advocate’s request.

Under the proposed regulations, the six that are 100 feet or closer to the edge of salt would be permanently closed, with long-term monitoring established. Five of the six are already inactive or plugged.

Operators of the remaining 21 caverns between 100 feet and 300 feet from the edge of salt would have a year to demonstrate they can continue to be operated safely.

Many of those are no longer active.

Some worry, some don’t

The 12 caverns within 150 feet of the edge of their salt formations — the estimated distance of the failed Texas Brine cavern — are spread primarily across south Louisiana in eight domes, which are huge underground formations of solid salt. Those domes stretch from Sulphur to Breau Bridge to the swamps of southeastern Ascension Parish.

Kenneth Carmouche and his wife, Christine, watched the Bayou Corne sinkhole in the news and sometimes talked about the salt dome about a half-mile south of their home in the Anse La Butte community between Breau Bridge and Lafayette.

The nearby Anse La Butte Dome contains a Cargill mining operation used to produce pharmaceutical and food-grade salt and an Enterprise Products liquefied petroleum gas storage complex.

New industry-submitted data indicate four caverns in the dome are within the proposed 300-foot minimum. One of those, operated by Cargill, is 130 feet from the edge of salt, 20 feet closer than the Texas Brine cavern was thought to be.

Kenneth Carmouche said he worries about companies continuing to remove material from the earth without backfilling the empty space.

“I mean, if you take something out and you don’t put nothing in, something’s going to happen,” he said. “Now, it might not happen tomorrow or the day after. Something’s going to happen. Just, I mean it’s common sense. You take air out of a tire, it’s going to go flat.”

But Pamela Alex, who lives nearby on Salt Mine Highway, is less concerned. Alex, 48, a housekeeper, has lived in the community her whole life and heard the old-timers speaking Creole French that renders Anse La Butte into “Anz La Bit.”

“We’ve always lived here, and there’s never been a problem,” she said.

Rick Rainey, an Enterprise spokesman, said the company is operating within existing rules, adding that its caverns are structurally safe.

Mark Klein, a Cargill spokesman, said none of his company's three caverns within the buffer zone are currently being used. Two are plugged and stable, and the remaining one, which is closer to the edge of salt than the Texas Brine cavern, is inactive and being monitored. It too is structurally sound, he said.

Two other salt domes in populated areas with caverns close to the edge of salt are the Pine Prairie Dome in Evangeline Parish and the Sulphur Mines Dome in Calcasieu Parish.

Homes in the Easton community are scattered along the east side of the Pine Prairie Dome and are mixed with the infrastructure of an oil and gas field. The new DNR information shows two liquefied petroleum gas storage caverns are within 150 feet of the salt edge. One is active. The other has been out of service since 1996.

Targa Midstream Services, which operates the caverns, did not respond to requests for comment but has told DNR that both caverns have passed safety tests.

Liz Hill, Evangeline Parish director of homeland security and emergency preparedness, said the Targa caverns don't cause much of a stir in Easton, where many people work in the industry and live near oil and gas wells and pipelines.

"Kids grow up riding their bikes right in front of them," she said. "People that live in the Easton area usually have grown up with it."

The Sulphur Mines salt dome, where extraction of oil, gas, brine or sulphur has gone on since the late 1860s, has five caverns within the proposed 300-foot minimum. Some homes dot the area south of the salt dome. The dome contains the cavern that is the closest to the edge of its formation, at 20 feet, according to DNR.

The cavern was plugged in July 2012. In March, the owner, Axiall Corporation, reported to DNR that the cavern and three others it operates there within the proposed 300-foot minimum are structurally sound.

Other caverns that are closer than 150 feet to the edge of salt include four in the Bayou Choctaw Dome, which lies under swamps in Iberville Parish northwest of Plaquemine.

One cavern there, operated by the nation's Strategic Petroleum Reserve, is only 60 feet from the boundary of its salt formation.

Concerns about the cavern's thin salt wall had been raised since the early 1980s. In 2011, before the Bayou Corne sinkhole emerged, the federal agency decided to drain the cavern because of concerns about oil leaking, citing the agency's own safe minimum distance standard of 300 feet.

Strategic Petroleum Reserve spokesman James Quern said the agency last month finished pumping oil from that cavern into a nearby one. The now-empty cavern, which shows no structural problems, will be continually monitored, he added.

Proposed rules stir debate

Environmentalists, some Bayou Corne residents and others fighting a proposed gas storage cavern expansion at the Jefferson Island Dome under Lake Peigneur in Iberia Parish plan to speak at a public hearing Tuesday on the proposed regulations.

Some find the minimum-safe-distance rules inadequate, while others don't see enough protections for people affected by failed storage and brine caverns. They also want the state to require environmental impact statements before new caverns are permitted.

Wilma Subra, a LEAN technical advisor, said she would like to see some kind of negotiation on the minimum distance from the edge of salt.

"I still think it needs to be much farther than what they are proposing," Subra said.

Courreges said the Office of Conservation arrived at the 300-foot minimum by adding a 100-foot safety factor to a U.S. Environmental Protection Agency safety standard calling for a 200-foot separation between salt caverns.

He added most new cavern permits include information on environmental impact, and that the new rules would require companies to provide assistance to people evacuated because of sinkholes.

Texas Brine provides assistance to evacuated Bayou Corne residents under the specific terms of its permit.

Some salt-dome cavern operators insist they can safely operate within the proposed 300-foot zone.

Louisiana Offshore Oil Port carved caverns from the onshore Clovelly Dome to hold crude deliveries from big tankers in the Gulf of Mexico. LOOP reported one of its caverns holding oil is 240 feet from the salt edge. Terry Coleman, vice president of engineering and technology for LOOP LLC, said the company continuously monitors cavern conditions.

"We use quite a bit of advanced technology to ensure the integrity of that cavern and all of our caverns," he said.

Whitney Autin, a geology professor at the State University of New York, College at Brockport, said the development of salt domes is often a question of real estate. Operators want to be in domes that are near pipelines and customers for brine and that have enough sweet spots left inside to mine salt, he said.

Autin, who got his geology doctorate from LSU and has published papers on Louisiana salt domes, said it may be hard to develop a single set of standard regulations that can account for all of the differences in geology and in salt-dome structure to ensure new caverns are safe.

"My analysis would be like there is no one-size-fits-all about the speed limit in a four-lane highway," he said. "Some places, the speed is 75, and some places, the speed limit on the Interstate is 45 if you're going through a thick, urban area."
